SUMMARY

Technical support engineer specializing in financial systems debugging and API-level troubleshooting. Fluent in Mandarin (HSK 5), English, and Indonesian — experienced supporting Chinese-speaking clients and stakeholders in fintech environments. Built and debugged a production-style transaction processing pipeline in Python and TypeScript, investigated classification failures through REST API testing and log analysis, and documented root causes with structured incident reports. Background in high-volume financial operations including transaction reconciliation, discrepancy investigation, and payment flow monitoring.

TECHNICAL PROJECTS

Transaction Classification System — Production Simulation (Python, FastAPI, PostgreSQL, React, TypeScript)

- Built an end-to-end transaction processing pipeline (parse → normalize → classify → store) handling real-world financial data
- Built and validated a rule-based classification engine in Python and FastAPI using keyword matching and priority logic, tested edge cases through REST API calls and observed system behavior under ambiguous inputs
- Queried SQL to validate classification outcomes and transaction data integrity
- Traced classification failures through a multi-stage pipeline using debug API endpoints and log analysis, identifying root causes in normalization and keyword matching logic
- Authored two structured incident reports documenting silent misclassification failures, including API reproduction steps, root cause evidence, and remediation proposals
- Designed as a production-simulation environment modeled on real support engineering workflows — including feature flags, observability alerts, rolling metrics, and admin endpoints for operational investigation

PROFESSIONAL EXPERIENCE

Anoc99 Corporation

Assistant Manager - Finance & Accounts

Pasay, Philippines

Nov 2023 – Dec 2024

- Performed transaction reconciliation by validating high-volume in/out financial flows, ensuring zero discrepancy across operational records
- Maintained accuracy of financial data supporting overall ledger integrity and reporting
- Coordinated with internal stakeholders to resolve inconsistencies and improve financial process efficiency

Finance Officer - Multi-Role Team: Risk, Accounting, Finance, Customer Service

Jan 2022 – Nov 2023

- Performed daily reconciliation of high-volume transactions across internal systems and external payment channels, ensuring accuracy and completeness
- Investigated and resolved transaction discrepancies, identifying root causes of reconciliation breaks under high-pressure conditions
- Tracked and validated incoming and outgoing fund flows, ensuring consistency between operational records and financial data aligned with ledger reporting
- Collaborated with risk, accounting, and payment teams to maintain accurate and reliable financial operations

PT. Pegatron Technology Indonesia

Production Engineer

Batam, Indonesia

Jul 2021 – Dec 2021

- Maintained and diagnosed production testing equipment through daily checks and calibration to prevent manufacturing delays
- Resolved hardware and process failures under time constraints to minimize downtime and ensure operational stability

PT. Indo Fudong Konstruksi

Assistant Manager - Import/Shipping Administration

Jakarta, Indonesia

Dec 2020 – May 2021

- Reviewed import documents (Bill of Lading, Commercial Invoice, Packing List, COO) and validated HS Code tax classifications against INTR regulation
- Coordinated with PPJK and logistics teams for timely container clearance and assisted with legal entity documentation and contract translation

Additional Experience

- English Teacher (Part-Time)* Sep 2017 – Feb 2018
Taught students from kindergarten to high school, focusing on language proficiency and confidence building
- Computer Technician (Internship)* Feb 2015 – Jul 2015
Hands-on repair of hardware, troubleshooting software, and network maintenance

TECHNICAL SKILLS

API & Debugging	: Postman, REST API testing, HTTP request/response analysis, endpoint debugging, error tracing, log analysis
Databases	: PostgreSQL, SQL — query writing for data validation, transaction verification, and troubleshooting classification outcomes
Programming	: Python, JavaScript, TypeScript — scripting for support workflows and automation
Frontend & Backend	: React.js, FastAPI, HTML, CSS
Systems & Tools	: Linux, networking fundamentals, browser DevTools, system troubleshooting, structured incident documentation

DOMAIN KNOWLEDGE

Languages	: Indonesian (native), English (fluent), Chinese (HSK 5), Japanese (conversational)
Financial Operations	: Reconciliation (bank vs internal), transaction validation, payment flow monitoring, discrepancy investigation, risk control
Process Optimization	: Workflow analysis, operational improvement

EDUCATION

Bachelor's Degree – Chinese Language Education

University Universal, Indonesia, 2016 – 2020

- Participants of Overseas Chinese Preschool Teacher Class in Guangzhou Children's School 2019 – 2020
- Thesis: *Comparison Analysis of Endocentric Phrase Between English and Chinese Language*

Vocational High School – Computer and Network Engineering (TKJ)

Batam Business School, 2013 – 2016

- Cisco Certified Network Associate (CCNA)
